Comprehensive Financial Analysis

Period: 2025-12-31 · Currency: RON · Industry: Manufacturing · industrial

Report generated: 2 October 2026

Fictional company — this is a generated sample, not a real entity; every figure is invented. Companie fictivă — acesta este un exemplu generat, nu o entitate reală; toate cifrele sunt inventate.

KNOWN ISSUES IN THIS REPORT

This report is the product's real output for the fictional book, and it is wrong or misleading in the places listed here. Each is an open defect of the engine, not of the sample. The correct figures are sums over named accounts of the published trial balance, computed by the script that builds this sample and repeated by a release gate — none is typed.

- 1. The cash flow is an estimate, and for this book the estimate contradicts the ledgers.** The engine does not read the prior period yet, so it estimates the cash-flow statement from the year-end balances alone. Net change in cash: the report prints 118,524.00 RON; on the two trial balances cash went from 236,635.22 RON to 226,786.80 RON, a movement of -9,848.42 RON (the report's figure implies an opening balance of 108,262.80 RON). Investing: the report prints -207,447.75 RON; the ledger shows 640,890.85 RON of fixed-asset additions excluding VAT, and 740,906.91 RON paid to fixed-asset suppliers. Financing: the report prints -475,090.51 RON; the ledger shows loans drawn 420,000.00 RON, loans repaid 196,000.00 RON, lease repayments 63,000.00 RON, the credit line moving by -20,000.00 RON, dividends 100,000.00 RON and interest 164,171.34 RON — -123,171.34 RON in all. Read every cash-flow line of this report, the cash walk, and the Piotroski test that rests on operating cash flow (801,062.26 RON here) as an estimate that does not tie to the ledgers.
- 2. One finding quotes a quick ratio on a different definition from the ratio table.** The ratio table prints a quick ratio of 0.96x: cash plus trade receivables (226,786.80 RON + 1,382,531.56 RON) over current liabilities (1,683,726.68 RON), which is 0.9558x. The finding "Headline liquidity leans on receivables that are not trade" prints "Quick ratio as reported 0.97x": that figure is current assets less inventory (3,286,458.08 RON – 1,656,139.72 RON) over the same liabilities, which is 0.9683x. The ratio table's 0.96x is the quick ratio this report reports; the finding's row is on another definition and should not be labelled "as reported".
- 3. The asset-age finding counts land, construction in progress and intangible assets.** The finding "Asset base is late in its depreciation life" says 40.5% of gross PP&E is depreciated and that a net book value of 3,241,585.45 RON carries 8.1 years of life at an annual charge of 400,705.85 RON. Those bases include land (310,000.00 RON, never depreciated), construction in progress (97,773.16 RON, not yet depreciated) and intangible assets (18,550.12 RON net). On depreciable tangible assets alone — buildings, equipment, vehicles and furniture, 5,004,741.11 RON gross — 43.7% is depreciated, and the remaining 2,815,262.17 RON carries 7.2 years at the year's depreciation charge of 393,195.66 RON.

The sample is regenerated when each fix ships; an issue leaves this list when the engine's figure equals the ledger's.

PROBLEME CUNOSCUTE ÎN ACEST RAPORT

Acest raport este rezultatul real al produsului pentru balanța fictivă și este greșit sau înșelător în locurile enumerate aici. Fiecare este un defect deschis al motorului, nu al exemplului. Cifrele corecte sunt sume pe conturi numite din balanța de verificare publicată, calculate de scriptul care construiește acest exemplu și repetate de o verificare de lansare — niciuna nu este tastată.

- 1. Fluxul de numerar este o estimare, iar pentru această balanță estimarea contrazice registrele.** Motorul nu citește încă perioada anterioară, deci estimează situația fluxurilor de numerar doar din soldurile de la sfârșitul anului. Variația netă a numerarului: raportul afișează 118.524,00 RON; în cele două balanțe numerarul a trecut de la 236.635,22 RON la 226.786,80 RON, o mișcare de -9.848,42 RON (cifra din raport presupune un sold inițial de 108.262,80 RON). Investiții: raportul afișează -207.447,75 RON; registrul arată intrări de imobilizări de 640.890,85 RON fără TVA și 740.906,91 RON plătiți furnizorilor de imobilizări. Finanțare: raportul afișează -475.090,51 RON; registrul arată credite trase 420.000,00 RON, credite rambursate 196.000,00 RON, rate de leasing 63.000,00 RON, linia de credit modificată cu -20.000,00 RON, dividende 100.000,00 RON și dobânzi 164.171,34 RON — în total -123.171,34 RON. Citește fiecare linie de flux de numerar din acest raport, graficul numerarului și testul Piotroski care se sprijină pe fluxul operațional (801.062,26 RON aici) ca pe o estimare care nu se leagă de registre.
- 2. O constatare citează o lichiditate imediată pe altă definiție decât tabelul de indicatori.** Tabelul de indicatori afișează o lichiditate imediată (quick ratio) de 0,96x: numerar plus creanțe comerciale (226.786,80 RON + 1.382.531,56 RON) împărțit la datoriile curente (1.683.726,68 RON), adică 0,9558x. Constatarea „Headline liquidity leans on receivables that are not trade” afișează „Quick ratio as reported 0,97x”: cifra aceea este activele curente minus stocurile (3.286.458,08 RON – 1.656.139,72 RON) împărțit la aceleași datorii, adică 0,9683x. Valoarea 0,96x din tabelul de indicatori este lichiditatea imediată pe care o raportează acest raport; rândul din constatare este pe altă definiție și nu ar trebui etichetat „as reported”.
- 3. Constatarea despre vârsta activelor include terenuri, imobilizări în curs și imobilizări necorporale.** Constatarea „Asset base is late in its depreciation life” spune că 40,5% din imobilizările corporale brute sunt amortizate și că o valoare netă contabilă de 3.241.585,45 RON mai are 8,1 ani de viață la o cheltuială anuală de 400.705,85 RON. Aceste baze includ terenuri

(310.000,00 RON, care nu se amortizează), imobilizări corporale în curs (97.773,16 RON, încă neamortizate) și imobilizări necorporale (18.550,12 RON net). Doar pe imobilizările corporale amortizabile — construcții, echipamente, mijloace de transport și mobilier, 5.004.741,11 RON brut — sunt amortizate 43,7%, iar restul de 2.815.262,17 RON mai are 7,2 ani la amortizarea anului, de 393.195,66 RON.

Exemplul este regenerat când este livrată fiecare corecție; o problemă dispăre din această listă când cifra motorului este egală cu cea din balanță.

Executive Summary

BAND MOVEMENTS: 2024-12-31 → 2025-12-31

Ranked by how many band rungs the ratio crossed, then how far past the rung it sits as a share of the band, then how much money that distance is worth against the statement base. 30 ratios and composites are valued in both periods: moved up a band 7, moved down 0, held their band 22, not comparable 1. Both periods are scored under the current band table and credit model revision (restated comparatives, a convention).

Improved (7)

- **Debt service coverage** Healthy → Strong · 2024-12-31 1.36x → 2025-12-31 1.72x · change +0.36x (+26.5%) · Strong rung at 1.5x · Debt service coverage on 701 / 711 / 5191 at 1.72x — at or above the 1.50x strong rung of debt service coverage for small inventory-heavy operator
- **Interest coverage (EBIT / interest)** Watch → Healthy · 2024-12-31 2.62x → 2025-12-31 3.84x · change +1.22x (+46.6%) · Healthy rung at 3x · Interest coverage on 701 / 711 / 666 at 3.84x — at or above the 3.00x healthy rung of interest coverage for small inventory-heavy operator
- **Net margin** Critical → Watch · 2024-12-31 2.8% → 2025-12-31 4.2% · change +1.4 pp · Watch rung at 3% · Net margin on 701 / 711 / 707 at 4.2% — at or above the 3.0% watch rung of net margin for small inventory-heavy operator
- **Return on assets** Watch → Healthy · 2024-12-31 3.9% → 2025-12-31 6.0% · change +2.1 pp · Healthy rung at 5% · Return on assets on 701 / 711 / 2131 at 6.0% — at or above the 5.0% healthy rung of return on assets for small inventory-heavy operator
- **Return on equity** Watch → Healthy · 2024-12-31 8.5% → 2025-12-31 12.9% · change +4.4 pp · Healthy rung at 12% · Return on equity on 701 / 711 / 117 at 12.9% — at or above the 12.0% healthy rung of return on equity for small inventory-heavy operator
- **Return on invested capital** Watch → Healthy · 2024-12-31 8.1% → 2025-12-31 10.4% · change +2.3 pp · Healthy rung at 10% · Return on invested capital on 701 / 711 / 117 at 10.4% — at or above the 10.0% healthy rung of return on invested capital for small inventory-heavy operator
- **Debt to EBITDA** Healthy → Strong · 2024-12-31 2.20x → 2025-12-31 1.94x · change -0.26x (-11.8%) · Strong rung at 2x · Debt to EBITDA on 1621 / 5191 / 701 at 1.94x — at or below the 2.00x strong rung of debt to EBITDA for small inventory-heavy operator

Deteriorated (0)

no ratio moved down a band between 2024-12-31 and 2025-12-31.

Valued in both periods but not comparable: Composite credit score (Not banded on its own: the credit letter grades this score.).

Not compared, because a period has no figure: Debt service coverage, lease-adjusted (No comparison: neither period has a figure for this ratio.).

OVERALL VERDICT:

No item reads critical; 11 of 29 ask for attention: Quick ratio; Cash ratio; EBITDA margin; Net margin; and 7 more.

How to read this document. Every figure is traceable: in the HTML version of this report, hover any ratio for its formula, the accounts behind it and the snapshot it came from. Charts never carry a number their own table does not print, and a figure the trial balance did not carry is stated as a gap rather than shown as zero.

NET TURNOVER	EBITDA	NET INCOME (ACCOUNT 121, CLOSING BALANCE)	TOTAL DEBT
RON 9,358,824	RON 1,058,533	RON 391,558	RON 2,051,400
	11.3% margin	account 121, closing balance — 4.2% margin	1.94x EBITDA

HEADLINE FIGURES

Comparison periods: vs prior period (2024-12-31) · vs last year (the same period — this book covers a full year) (2024-12-31).

FIGURE	2025-12-31	VS PRIOR PERIOD	VS LAST YEAR (THE SAME PERIOD — THIS BOOK COVERS A FULL YEAR)
Net turnover	RON 9,358,824	+1,002,514 (+12.0%)	+1,002,514 (+12.0%)

WHY THIS VERDICT

BBB · composite 69.6 · Engine canonical model · weights 30/20/15/10/10/10/5 · ladder AAA ≥ 90 · AA ≥ 80 · A ≥ 70 · BBB ≥ 60 · BB ≥ 50 · B ≥ 40 · CCC ≥ 25 · CC ≥ 0

WHAT THIS BOOK VERDICT BAND PRODUCED IT

Quick ratio	0.96x	WATCH	strong ≥ 1.5x · healthy ≥ 1x · watch ≥ 0.7x · critical < 0.7x (the engine's band table)
Cash ratio	0.13x	WATCH	strong ≥ 0.5x · healthy ≥ 0.2x · watch ≥ 0.1x · critical < 0.1x (the engine's band table) — cash and bank balances only — short-term investments are NOT counted, so this is the floor reading of same-day liquidity
EBITDA margin	11.3%	WATCH	strong ≥ 25% · healthy ≥ 15% · watch ≥ 8% · critical < 8% (the engine's band table)

WHAT THE NUMBERS SAY

The 5 findings the engine ranked highest on this book. Each is printed in full — claim, formula, accounts and ladder — in What the numbers say.

MEDIUM · 15.5% OF EBITDA **The financial line is not incidental to the result** — Financing costs the book more than its financial assets return: financial expense of RON 171,045.53 against financial income of RON 6,902.16 leaves a net cost of RON -164,143.37, 15.5% of RON 1,058,532.69.

LOW · 40.5% OF GROSS PP&E **Asset base is late in its depreciation life** — 40.5% of gross PP&E is already depreciated; the remaining net book value of RON 3,241,585.45 carries 8.1 years of life at the current annual charge of RON 400,705.85.

LOW · 4.9% OF EBITDA **Part of EBITDA is not trading income** — RON 51,498.35 of operating income is other operating income and provision reversals rather than trading margin — 4.9% of RON 1,058,532.69; the operating cash proxy is RON 851,398.17 against an EBITDA of RON 1,058,532.69, a conversion of 80.4%.

LOW · 4.2% OF REVENUE **Suppliers and customers move the cash cycle** — The net trade float is RON 390,848.73: RON 1,382,531.56 owed by customers against RON 991,682.83 owed to suppliers — 54 days of sales outstanding against 42 days of payables (RON 1,019,182.83 of balance-sheet payables over RON 8,935,369.45 of total operating expense, on 365 days), a gap of 12 days.

INFO · 1.2% OF TOTAL CURRENT LIABILITIES **Headline liquidity leans on receivables that are not trade** — The current ratio of 1.95x falls to 1.94x once RON 21,000.00 of non-trade receivables is removed; the cash ratio is 0.13x.

WHAT WOULD CHANGE THE VERDICT

Ranked by distance to the rung as a share of the rung itself, nearest first — computed from the same band object each badge above was decided by. Each row prints at the precision its own subtraction needs, so Now – Rung equals Distance on every line; the cards above

round the same values to the document's display precision, which is why a figure here can carry more decimals than the card it came from. It is the same value, not a second one.

RATIO	NOW	RUNG	DISTANCE	CROSSING IT
Current ratio	1.9519×	2.0000×	0.0481×	would move it up to STRONG
Quick ratio	0.9558×	1.0000×	0.0442×	would move it up to HEALTHY
Debt to assets	31.36%	30.00%	1.36%	would move it up to STRONG
Asset turnover	1.431×	1.500×	0.069×	would move it up to STRONG
Equity ratio	46.27%	50.00%	3.73%	would move it up to STRONG

SERIES	RON	SOURCE

Tax expense	(RON 75,175)
Net Income (account 121, closing balance)	RON 391,558

EBITDA RECONCILIATION — THE STOCK VARIATION AND OWN WORK CAPITALISED ARE INSIDE EBITDA

2025-12-31

EBITDA before stock variation and own work capitalised	RON 934,793
Change in inventories of finished goods and WIP	RON 123,740
Own work capitalised	RON 0
= EBITDA	RON 1,058,533

EBITDA includes the stock variation. Variația stocurilor de produse (711) sits beside cost of sales and own work capitalised (72x) is an operating line outside turnover; both are inside EBITDA and the operating result, and neither is in net turnover, the denominator of every margin. On a closed trial balance the 711 line is derived from account 121, so the reconciliation closes by construction.

Cash and Net Debt

SERIES	RON	SOURCE
Cash before working capital	RON 901,608	assembled_cf.cf_before_wc
Working capital	-RON 100,545	assembled_cf.working_capital_change
Investing	-RON 207,448	assembled_cf.cash_from_investing
Financing	-RON 475,091	assembled_cf.cash_from_financing
Net change in cash	RON 118,524	assembled_cf.net_change_in_cash

The engine flags this reconstruction as approximated (``assembled\_cf.is\_approximated``), which is why the bars are hatched: the working-capital, investing and financing steps are estimated from period-end balances, not from movement detail. Period-end cash is RON 226,787 against RON 236,635 at 2024-12-31: the two balance sheets show cash moving by -RON 9,848, not by the RON 118,524 this walk ends on. The RON 128,372 between them is not explained — the engine's cash-flow reconstruction does not use the prior period's balances yet, so read the walk as an estimate and the balance sheets as the fact.

- Days sales outstanding: Average 54-day collection cycle on receivables.
- Inventory days (DIO): Stock is held 65 days on average across materials, products and merchandise.
- Days payables outstanding (on total operating cost): 42-day average to settle suppliers.
- Cash conversion cycle: 81-day gap between cash out and cash in.

INVENTORY DAYS — SPLIT BY STOCK TYPE

STOCK TYPE	ACCOUNTS	DAYS DIVIDED BY
Raw materials and consumables	accounts 301, 302, 303, 308	33 days ÷ Materials consumed (601 + 602 + 603)
Finished goods and work in progress	accounts 331, 341, 345, 348	46 days ÷ Cost of production sold
Merchandise	accounts 371, 378	46 days ÷ Cost of goods resold (607)
Other stock	accounts 381	inside the total, no days of its own
Inventory days (total, flow-weighted)		65 days ÷ cost of production sold + cost of goods resold (607)

Basis: average of the balances at 1 January and 31 December
The same split on the period-end balance: 69 days
Seasonality: food and consumer-goods stock is seasonal: a year-end balance can sit far from the usual level; only monthly balances remove the effect

Cash conversion cycle	81d	bands: 30d / 60d / 90d (lower is better)

Each track is one ratio placed on the bands its verdict was decided by — the same ladder the card above it prints and the badge was banded on, so the distance to the next band is visible rather than compressed into a word. These are GENERAL-SME bands, not calibrated to this company's industry: the engine serves its band definitions as `general\_sme\_fallback`, and the ladders printed on the cards in this document are those same general-SME defaults.

COVENANT HEADROOM — NOT CHARTED

Missing: the facility's covenant terms (tested ratio, threshold, test date, cure rights).

Nothing in the envelope carries a covenant. Drawing headroom against a benchmark band instead would put a lender's word on a threshold no lender set — the reader would take it for the facility's own test.

To produce it: Enter the covenant package for each facility; headroom is then the tested ratio against its own contractual threshold, not against a benchmark.

Not charted: no covenant terms are on file for this entity. The band tracks above are benchmarks, not covenants.

Grade ladder (engine-canonical-v1): AAA ≥ 90 · AA ≥ 80 · A ≥ 70 · BBB ≥ 60 · BB ≥ 50 · B ≥ 40 · CCC ≥ 25 · CC ≥ 0

Altman Z": Safe zone (2.6+ threshold, score 4.34) · Engine canonical model · weights 30/20/15/10/10/10/5 · ladder AAA ≥ 90 · AA ≥ 80 · A ≥ 70 · BBB ≥ 60 · BB ≥ 50 · B ≥ 40 · CCC ≥ 25 · CC ≥ 0

Component	Value Weight Contribution			Read
Altman Z"	4.34	30%	28.8	Safe zone (2.6+ threshold, score 4.34)
Profitability sub-score 0–100 (ROE + net margin)	18.30	20%	3.7	weak on the model's 0–100 component scale
Leverage sub-score 0–100 (net debt ÷ EBITDA)	70.00	15%	10.5	adequate on the model's 0–100 component scale
Interest-coverage sub-score 0–100 (EBIT ÷ interest)	60.00	10%	6.0	adequate on the model's 0–100 component scale
DSCR sub-score 0–100 (EBITDA ÷ debt service)	90.00	10%	9.0	strong on the model's 0–100 component scale
Liquidity sub-score 0–100 (current + quick + cash)	69.90	10%	7.0	adequate on the model's 0–100 component scale
Equity-ratio sub-score 0–100	92.50	5%	4.6	strong on the model's 0–100 component scale

Engine canonical credit score (Romanian SME calibration). Weighted composite (30/20/15/10/10/10/5) with Altman Z" as the dominant signal. The letter grade is banded with the ladder this model reported for this period: AAA ≥ 90 · AA ≥ 80 · A ≥ 70 · BBB ≥ 60 · BB ≥ 50 · B ≥ 40 · CCC ≥ 25 · CC ≥ 0. This is a quantitative model output, not a regulated credit rating. A formal lender internal rating or BNR-supervised model may weight other factors (sector outlook, management quality, parent-group support, ESG) and produce a different result — a defensible analytical anchor for lender conversations, not a substitute for a formal rating opinion.

SERIES	POINTS	SOURCE
Term: Altman Z"	28.8	weight 30% · ceiling 30.0
Term: Profitability sub-score 0–100 (ROE + net margin)	3.7	weight 20% · ceiling 20.0
Term: Leverage sub-score 0–100 (net debt ÷ EBITDA)	10.5	weight 15% · ceiling 15.0
Term: Interest-coverage sub-score 0–100 (EBIT ÷ interest)	6.0	weight 10% · ceiling 10.0
Term: DSCR sub-score 0–100 (EBITDA ÷ debt service)	9.0	weight 10% · ceiling 10.0
Term: Liquidity sub-score 0–100 (current + quick + cash)	7.0	weight 10% · ceiling 10.0
Term: Equity-ratio sub-score 0–100	4.6	weight 5% · ceiling 5.0

The pale bar is the most each term could contribute at its weight; the filled bar is what it did contribute. 30.4 points of the composite were given up across the 7 weighted terms, and the marked rows are the ones that gave up more than two-thirds of their own ceiling.

ASSET AGE — ACCUMULATED DEPRECIATION AGAINST GROSS PP&E — NOT CHARTED

Missing: the gross-PP&E aggregate (``assembled_bs.ppe_gross``); the accumulated-depreciation aggregate (``assembled_bs.ppe_accumulated_depreciation``).

The balance sheet above prints the gross cost of each class of PP&E and the accumulated depreciation against them, row by row. This chart reads two served aggregates of those rows, and the engine does not serve them yet. It is not drawn from a sum made here: that would be a second calculation beside the engine's.

To produce it: The engine needs to serve the two aggregates it already holds as rows; the chart is then accumulated depreciation over gross cost.

Not charted: the gross-cost and accumulated-depreciation rows are on the balance sheet above, but the two aggregates this chart reads are not served.

What the numbers say

1

MEDIUM · 15.5% OF EBITDA

The financial line is not incidental to the result

Each finding below carries the claim, the arithmetic in words, the accounts it read with their balances, and the severity ladder it was banded against — so a reader who disagrees with a level can check it without leaving the page. Ranked by severity level, then by materiality descending; ties broken by detector id ascending. The top 5 carry into the executive summary.

Financing costs the book more than its financial assets return: financial expense of RON 171,045.53 against financial income of RON 6,902.16 leaves a net cost of RON -164,143.37, 15.5% of RON 1,058,532.69.

Formula: Financial income – financial expense, against operating EBITDA

Scaled against EBITDA RON 1,058,532.69 · magnitude RON 164,143.37 · 15.5% of it. The financial result is graded against the operating earnings it sits beside, because the question is how much of the bottom line the company earned by trading rather than by lending or borrowing.

WHAT WAS MEASURED	VALUE	SEVERITY LADDER ACTUALLY APPLIED	
Financial income	RON 6,902.16	Critical at 50.0% of ebitda or more

766	Venituri din dobânzi	RON 2,590.60	financialIncome

Financing costs the book more than its financial assets return: financial expense of RON 171,045.53 against financial income of RON 6,902.16 leaves a net cost of RON -164,143.37, 15.5% of RON 1,058,532.69. Graded medium: the amount at stake is 15.5% of ebitda, against the ladder printed beside this finding. The financial result is graded against the operating earnings it sits beside, because the question is how much of the bottom line the company earned by trading rather than by lending or borrowing.

So what: Separate the operating result from the financial one when judging the trading business. Financial income earned on assets or affiliates does not repeat because trading improved.

Wording above is the engine's own deterministic template — the advisory lane was not invoked for this build; no figure in it was authored by anything but the detector.

2

LOW · 40.5% OF GROSS PP&E

Asset base is late in its depreciation life

40.5% of gross PP&E is already depreciated; the remaining net book value of RON 3,241,585.45 carries 8.1 years of life at the current annual charge of RON 400,705.85.

Formula: Accumulated depreciation ÷ gross PP&E; net book value ÷ annual D&A = remaining book life

Scaled against Gross PP&E RON 5,412,514.27 · magnitude RON 2,189,478.94 · 40.5% of it. Depreciation is graded against the asset base that produced it, so a factory and a courier are compared on the share of their OWN gross PP&E already written off rather than on an absolute charge.

WHAT WAS MEASURED	VALUE	SEVERITY LADDER ACTUALLY APPLIED
Depreciated share of gross PP&E	40.5%	Critical at 85.0% of gross pp&e or more
Gross PP&E	RON 5,412,514.27	High at 70.0% of gross pp&e or more
Accumulated depreciation	RON 2,189,478.94	Medium at 55.0% of gross pp&e or more
Net book value (PP&E and intangibles)	RON 3,241,585.45	Low at 35.0% of gross pp&e or morethis book
Amortised share of gross intangibles	70.2%	Info — below every cutoff
Annual depreciation and amortisation charge	RON 400,705.85	
Remaining book life at current charge	8.1 years	

ACCOUNT	NAME	BALANCE	ROLE
211	Terenuri și amenajări de terenuri	RON 310,000.00	gross ppe
212	Construcții	RON 1,640,000.00	gross ppe
2131	Echipamente tehnologice (mașini, utilaje și instalații de lucru)	RON 2,778,347.03	gross ppe
2133	Mijloace de transport	RON 477,964.77	gross ppe
214	Mobilier, aparatură birotică, alte active corporale	RON 108,429.31	gross ppe
231	Imobilizări corporale în curs de execuție	RON 97,773.16	gross ppe
2812	Amortizarea construcțiilor	RON -492,057.21	accumulated depreciation
2813	Amortizarea instalațiilor și mijloacelor de transport	RON -1,623,430.27	accumulated depreciation
2814	Amortizarea altor imobilizări corporale	RON -73,991.46	accumulated depreciation
208	Alte imobilizări necorporale (programe informatice)	RON 62,224.03	gross intangibles
2808	Amortizarea altor imobilizări necorporale	RON -43,673.91	accumulated amortization

40.5% of gross PP&E is already depreciated; the remaining net book value of RON 3,241,585.45 carries 8.1 years of life at the current annual charge of RON 400,705.85. Graded low: the amount at stake is 40.5% of gross pp&e, against the ladder printed beside this finding. Depreciation is graded against the asset base that produced it, so a factory and a courier are compared on the share of their OWN gross PP&E already written off rather than on an absolute charge.

So what: Ask for the fixed-asset register by acquisition year and the committed capex plan. A book this far through its depreciation life either has replacement spending ahead of it or is running assets past their useful life, and the two have very different cash consequences.

Wording above is the engine's own deterministic template — the advisory lane was not invoked for this build; no figure in it was authored by anything but the detector.

3 LOW · 4.9% OF EBITDA Part of EBITDA is not trading income

RON 51,498.35 of operating income is other operating income and provision reversals rather than trading margin — 4.9% of RON 1,058,532.69; the operating cash proxy is RON 851,398.17 against an EBITDA of RON 1,058,532.69, a conversion of 80.4%.

Formula: (Other operating income + provision reversals) ÷ EBITDA; operating cash proxy ÷ EBITDA; capitalised own work

Scaled against EBITDA RON 1,058,532.69 · magnitude RON 51,498.35 · 4.9% of it. Non-trading income is graded against the EBITDA it is inside, so the severity answers "how much of this margin is not trading" rather than "is this a big number".

WHAT WAS MEASURED	VALUE	SEVERITY LADDER ACTUALLY APPLIED
Other operating income and provision reversals	RON 51,498.35	Critical at 30.0% of ebitda or more
EBITDA	RON 1,058,532.69	High at 15.0% of ebitda or more
Non-trading income as a share of ebitda	4.9%	Medium at 7.0% of ebitda or more
EBITDA	RON 1,058,532.69	

WHAT WAS MEASURED	VALUE	SEVERITY LADDER ACTUALLY APPLIED	
Provision reversals (781)	RON 0.00	Low at 2.0% of ebitda or more	this book
Capitalised own work	RON 0.00	Info — below every cutoff	
Operating cash proxy	RON 851,398.17		
Operating cash proxy ÷ EBITDA	80.4%		

ACCOUNT	NAME	BALANCE	ROLE
7584	Venituri din subvenții pentru investiții	RON 36,000.00	otherIncome
7588	Alte venituri din exploatare	RON 15,498.35	otherIncome

RON 51,498.35 of operating income is other operating income and provision reversals rather than trading margin — 4.9% of RON 1,058,532.69; the operating cash proxy is RON 851,398.17 against an EBITDA of RON 1,058,532.69, a conversion of 80.4%. Graded low: the amount at stake is 4.9% of ebitda, against the ladder printed beside this finding. Non-trading income is graded against the EBITDA it is inside, so the severity answers "how much of this margin is not trading" rather than "is this a big number".

So what: Strip the non-trading income out before applying any multiple. Provision reversals and other operating income do not recur, and an EBITDA that leans on them overstates the run rate.

Wording above is the engine's own deterministic template — the advisory lane was not invoked for this build; no figure in it was authored by anything but the detector.

4 LOW · 4.2% OF REVENUE Suppliers and customers move the cash cycle

The net trade float is RON 390,848.73: RON 1,382,531.56 owed by customers against RON 991,682.83 owed to suppliers — 54 days of sales outstanding against 42 days of payables (RON 1,019,182.83 of balance-sheet payables over RON 8,935,369.45 of total operating expense, on 365 days), a gap of 12 days.

Formula: DSO = trade receivables net ÷ revenue × the period's days; DPO = balance-sheet payables ÷ total operating expense × the period's days (the ratio table's one DPO, engine.ratios.table.dpo_days); float = trade receivables net – trade payables

Scaled against Revenue RON 9,358,823.90 · magnitude RON 390,848.73 · 4.2% of it. Trade float is a claim on a year of trading, so it is graded as a share of that year's revenue — the same base both day counts already annualise against.

WHAT WAS MEASURED	VALUE	SEVERITY LADDER ACTUALLY APPLIED	
Days sales outstanding	54 days	Critical at 20.0% of revenue or more	
Days payables outstanding (on total operating cost)	42 days	High at 10.0% of revenue or more	
Collection gap (DSO – DPO)	12 days	Medium at 5.0% of revenue or more	
Net trade float (receivables – payables)	RON 390,848.73	Low at 1.0% of revenue or more	this book
Trade receivables net of provisions	RON 1,382,531.56	Info — below every cutoff	
Trade payables	RON 991,682.83		
Balance-sheet payables (the DPO's numerator)	RON 1,019,182.83		
Total operating expense	RON 8,935,369.45		
The period's day count	365 days		

ACCOUNT	NAME	BALANCE	ROLE
4111	Clienți	RON 1,373,873.59	trade receivable
4118	Clienți incerti sau în litigiu	RON 55,932.10	trade receivable
491	Ajustări pentru deprecierea creanțelor - clienți	RON -47,274.13	trade receivable

ACCOUNT	NAME	BALANCE	ROLE
401	Furnizori	RON 933,631.42	trade payable
404	Furnizori de imobilizări	RON 58,051.41	trade payable

The net trade float is RON 390,848.73: RON 1,382,531.56 owed by customers against RON 991,682.83 owed to suppliers — 54 days of sales outstanding against 42 days of payables (RON 1,019,182.83 of balance-sheet payables over RON 8,935,369.45 of total operating expense, on 365 days), a gap of 12 days. Graded low: the amount at stake is 4.2% of revenue, against the ladder printed beside this finding. Trade float is a claim on a year of trading, so it is graded as a share of that year's revenue — the same base both day counts already annualise against.

So what: Compare the collection gap with the credit terms actually granted. Where suppliers fund the cycle, that funding is a payables line that can be withdrawn, not a permanent source.

Wording above is the engine's own deterministic template — the advisory lane was not invoked for this build; no figure in it was authored by anything but the detector.

5 INFO · 1.2% OF TOTAL CURRENT LIABILITIES **Headline liquidity leans on receivables that are not trade**

The current ratio of 1.95× falls to 1.94× once RON 21,000.00 of non-trade receivables is removed; the cash ratio is 0.13×.

Formula: Current ratio recomputed with non-trade receivables (intercompany, other debtors, supplier advances, tax recoverable) removed from current assets

Scaled against Total current liabilities RON 1,683,726.68 · magnitude RON 21,000.00 · 1.2% of it. The excluded assets are graded against the liabilities they were being counted as cover for, which is the same denominator the current ratio itself uses — so the severity IS the ratio movement.

WHAT WAS MEASURED	VALUE	SEVERITY LADDER ACTUALLY APPLIED
Current ratio as reported	1.95×	Critical at 75.0% of total current liabilities or more
Current ratio, non-trade receivables removed	1.94×	High at 40.0% of total current liabilities or more
Movement in the current ratio	0.01×	Medium at 20.0% of total current liabilities or more
Non-trade receivables removed	RON 21,000.00	Low at 5.0% of total current liabilities or more
Quick ratio as reported	0.97×	Info — below every cutoff
Cash ratio as reported	0.13×	this book

ACCOUNT	NAME	BALANCE	ROLE
409	Furnizori - debitori	RON 21,000.00	non trade receivable

The current ratio of 1.95× falls to 1.94× once RON 21,000.00 of non-trade receivables is removed; the cash ratio is 0.13×. Graded info: the amount at stake is 1.2% of total current liabilities, against the ladder printed beside this finding. The excluded assets are graded against the liabilities they were being counted as cover for, which is the same denominator the current ratio itself uses — so the severity IS the ratio movement.

So what: Read the current ratio in its trade-only form when setting covenant headroom. The non-trade balances removed here are not stock that converts on ordinary terms, and a lender will discount them.

Wording above is the engine's own deterministic template — the advisory lane was not invoked for this build; no figure in it was authored by anything but the detector.

CHECKED AND CLEAR

These detectors ran on this book and did not fire. Each states why — a check that found nothing is a result, not an absence.

- **The P&L does not reach statutory profit on its own** — On this closed trial balance the stock variation (711) is derived from account 121, so the P&L reaches statutory profit by construction; the checks that still bind are the guards the derivation passed (every class-6/7 account read, the remainder within the 711 turnover, 121's opening cleared).
- **Related-party and other-debtor balances sit inside the assets** — No intercompany or related-party receivable row is present in the classified balance sheet.
- **Balances no statement line explains** — Every account in the book matched a classification rule; no balance is carried under an Unclassified row.

Recommendations

HIGH Stand up monthly DSCR / Debt-EBITDA monitoring dashboard

Why: Annual covenant testing leaves blind spots between reviews — one bad quarter can push DSCR below the 1.25x floor a lender typically tests, without anyone noticing until the formal test. DSCR 1.72x against the 1.50x green floor has used 87.0% of the green tier, so the margin is real but no longer comfortable. Graded on the green tier this book has consumed as a share of the green tier itself — measured at 87.0%; the ladder is critical $\geq 100.0\%$ · high $\geq 85.0\%$ · medium $\geq 65.0\%$ · low $\geq 40.0\%$. Monitoring is graded on how close THIS book already sits to the tiers the dashboard would watch — the same tiers the action list proposes — so a book with room reads as routine hygiene and a book against the tier reads as urgent.

Action: Implement three-tier monthly tracking: GREEN (DSCR > 1.50x / D-EBITDA < 5.5x), AMBER (1.30-1.50x / 5.5-6.5x), RED (< 1.30x / > 6.5x). These tiers are a lender-covenant convention for early warning, set around the covenant levels a lender typically tests — they are not the bands this report grades the same ratios on, which are printed beside each ratio. AMBER triggers management review; RED triggers proactive lender engagement before the formal covenant test. Wire the dashboard to the monthly close; ~2 hours of bookkeeping per month to maintain.

HIGH Refinance window: DSCR 1.72x and Debt/EBITDA 1.94x are bankable

Why: DSCR 1.72x and Debt/EBITDA 1.94x put the company in bankable territory. Current rate ~8.00% (RON 164,171 interest on RON 2,051,400 debt) is worth testing against competing offers — every 50bps saved is RON 10,257/year. Graded on Interest saved per 50bps as a share of net profit — measured at 2.6%; the ladder is critical $\geq 5.0\%$ · high $\geq 2.0\%$ · medium $\geq 1.0\%$ · low $\geq 0.50\%$. A refinancing is worth a management conversation when the money it saves is material against what the company earns in a year, not when the debt clears an absolute size in RON.

Action: Request indicative term sheets from 2–3 alternative lenders for refinancing 30-50% of the current balance. Frame as syndication, not full replacement, to keep the existing lender relationship intact. Time the refinance to before the next major capex drawdown so the new lender prices the post-capex cash flow profile. Negotiate the covenant package: target a DSCR floor of 1.25x and a leverage ceiling you can hold through a bad quarter, and resist step-ups that tighten faster than the business can deleverage.

Estimated impact: RON 10K / year

Basis of Preparation

BASIS OF PREPARATION

Figures are computed from the trial balance uploaded for the period. Ratios follow standard lender conventions (Altman Z-Score, DSCR, debt-to-EBITDA, etc.); benchmarks are indicative and industry-dependent. Where the underlying trial-balance reconciliation gap exceeds tolerance, the affected figure is annotated in the relevant statement above. The statements, ratios and credit score in this report were read and computed by code — the deterministic engine — from the uploaded trial balance; no AI model read or produced these figures. Final analytical judgement and any onward decisions remain with management. Balance-sheet provenance: sheet Balanta · read deterministic · mapping pack ro_omfp1802_v2; each balance-sheet row above names its account codes.

Charts. Every chart is generated with this document, from the same served figures the statements above print, and carries its own table — no chart is the only place a number appears. A chart whose inputs the trial balance did not carry is replaced by a card naming the missing input, never by an empty axis.
